

Smart Safety Training App

Are you looking for a solution to create individual (safety-)trainings for your drivers, visitors, employees or any other user group?

The **VAS Safety Training Application** is a standalone web application which gives you the opportunity to create and administrate individual safety trainings. Control questions can be added to ensure that the training has been understood. After every successful training, a signed QR-code is generated including the user information, validity and more. The certificate can be sent automatically by email. Grant access to your factory premises based on the successful completion of the (safety-)training. All training data can be easily created or edited via the administration page.

Accessible

The Safety Training Application can be accessed from everywhere using a tablet, smartphone, computer or a terminal directly at the plant. No printouts needed.

Customizable

The Safety Training Application is highly customizable. Create your own completely customized safety instructions and Control Questions. Even the design can be changed to your needs if necessary.

Integrable

The Safety Training Application can easily be embedded into your workflow. For example, plan your plant access by a valid safety training certificate (signed QR-Code).

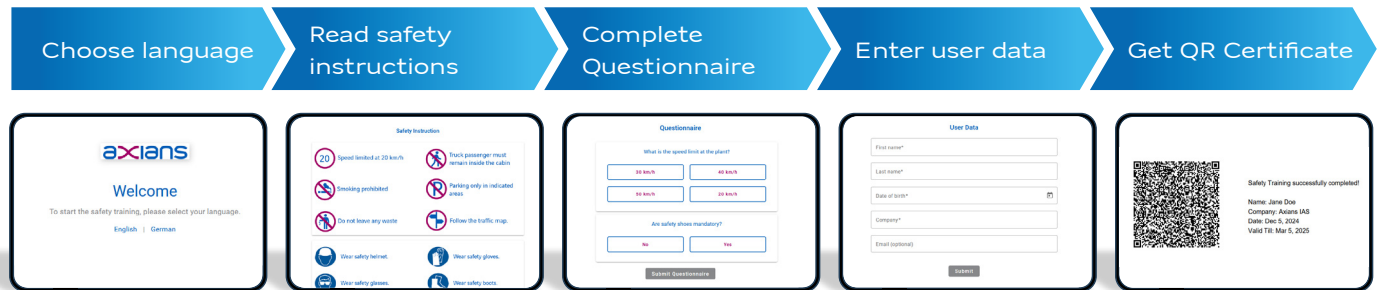

Consistent

The Safety Training Application ensures consistent training and therefore increases your overall yard safety. The certificate expires after a customizable period of time and must be obtained again.

Your Benefits

Simple user process

SaaS – ready for use

Areas of Application

Safety training is an important tool to minimize risks and enhance overall safety. In general, the Safety Training Application, with its high degree of customization, can be adapted to various situations. Here are some examples where the VAS Safety Training Application could help:

Future-proof

Our software including the safety training applications is constantly evolving and improving according customer needs. We're committed to providing the best experience possible, and to that end, new features will be regularly added. This is especially intriguing because the safety training application is available as a SaaS solution. Stay tuned for updates that will enhance functionality, improve user experience, and ensure the highest standard of safety training.
