VAS

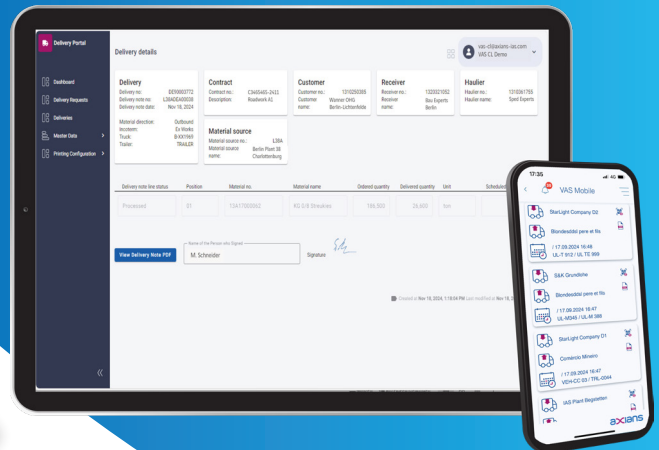

Digitize your delivery data workflow

with VAS Cloud Logistics Delivery Portal & VAS Mobile App

Delivery tickets in the bulk goods workflow are no longer a matter of printout and manual distribution. Tickets created by VAS Yard Management when driver checks out at the loading plant, can be automatically stored centrally and also submitted to a mobile app for the driver. As a consequence, all involved roles in the logistic workflow have direct access to electronic delivery data, either with access to a browser-based Delivery Portal (e.g. for customers, admin of hauliers, accounting department of producer) or by using the VAS Mobile App (e.g. truck driver or also material receiver at the construction site).

Benefits at a glance
▸ No more printouts of delivery tickets
▸ No efforts for delivery ticket handling and distribution
▸ Easy access for all roles to delivery data

Save 1 EUR or more per delivery!

Key Features

Delivery Portal

Module of the cloud-based logistics platform (other modules: order entry, order and transport planning).

Mobile Application

The app is available for Android and iOS and can be conveniently downloaded from the respective app stores.

Flexible mobile app operation

Flexible use with or without login - the data can be uploaded automatically or scanned via QR code.

Advanced mobile ePoD functionality

Including centralised storage of signature data, which enables secure and efficient management of all delivery data.

Seamless integration

Integration in VAS Yard Management guaranteed the automatic transfer of delivery data.

Multilanguage support

The delivery portal supports several languages, reduces language barriers and promotes mutual understanding.

axians

Why Delivery Portal & VAS Mobile App?

Transparency
Users can access delivery documents and current status, including ePoD info.

Productivity
Automatic delivery data supply saves time by avoiding manual handling.

Organization
Clear workflow and automatic data streams eliminate inconsistent manual data capture.

Sustainability
Digitized delivery data workflow saves resources by avoiding printouts.

Customer satisfaction
Less effort and paperwork for customers, with faster access to delivery data..

Consistency
Immediate access to consistent delivery data for all users.
